

ERIK KARÁSEK.

JUNIOR DEVELOPER · AI AUTOMATION · IT SUPPORT

+420 731 322 180 · erikkarasek@centrum.cz · Hradec Králové, CZ · github.com/ErikKarasek · erikkarasek.cz

PORTFOLIO

PROFILE

A junior developer who builds AI automations and applications from idea to deployment. I run my own AI agents that read job postings and watch over my projects, plus a dashboard for them on Mac and iPhone. I check what the model returns with code rather than trusting it blindly. Most recently I worked as an analyst / tester on the ENTSO-E project at Unicorn, and before that in IT support (L1 helpdesk, Active Directory). I'm now looking for a role in AI automation or development.

KEY TECHNOLOGIES

AI agents · Workers AI · LLM APIs · Prompt engineering · REST/JSON APIs · TypeScript · Node.js · Python · React · SwiftUI · Tauri & Rust · Cloudflare Workers & D1

EXPERIENCE

ANALYST / TESTER

July – November 2026

Unicorn · ENTSO-E Transparency Platform project · Hradec Králové (hybrid)

- Writing test cases for data extensions of the platform.
- Testing on the DEV environment and verifying features against the specification.
- Working in Jira: managing and tracking tickets, documenting the process.
- Reviewing scenarios together with senior testers and the project lead.

ICT TECHNICIAN L1

April 2026 – June 2026

BEDNAR FMT s.r.o. · Rychnov nad Kněžnou

- First-level user support: taking, resolving and closing incidents in JIRA.
- Preparing and configuring Windows workstations, joining the domain via Active Directory, remote support over RDP and TeamViewer.
- Network infrastructure: patching ethernet cables in the rack, wiring patch panels to switches and tracing which wall socket belongs to which port.
- Connecting new workstations and devices to the network, fixing LAN and Wi-Fi outages from the socket all the way to the machine.
- Diagnosing and fixing hardware, tracking and maintaining IT equipment.

INTERNSHIP – 3D GRAPHICS

2024

Erasmus+, Germany

- Creating 3D models and animations in Blender: textures, lighting, export for digital design.
- Working in an international team on assigned projects: splitting up the work, checking in as it went and handing over the finished pieces.
- The whole internship, and the team around it, ran in English.

STRENGTHS

Fast learner, self-driven: I find my way around new technologies and processes quickly.

AI-first: I use AI every day to build faster and better.

Reliable, detail-minded: I see things through to the end.

PERSONAL PROJECTS

AUTOMATION & AI AGENTS

2026

More about it: erikkarasek.cz/automation

- How I work across every project below: an agent only ever proposes and a human confirms, code and tests check what the model returns, and a cheap model filters before a larger one is called on what is left.
- A set of my own AI agents that handles the routine around my job hunt and projects: at night they write up what I did and review the new code, by day they read companies' replies, and in the morning they send a digest of new postings.
- Everything arrives in Telegram with buttons, and nothing changes in the application board until one is pressed.
- Node.js, Claude CLI, Telegram Bot API, IMAP and scheduled jobs (launchd, Cloudflare Workers); a watchdog reports a job that did not run, because a silent failure is worse than none.

WISP 2026

github.com/ErikKarasek/wisp • More about it: erikkarasek.cz/wisp

- A dashboard for my own AI agents: a Tauri Mac app (TypeScript + Rust) with an overlay in the notch, and a native SwiftUI iPhone client with widgets and a Live Activity in the Dynamic Island.
- Claude, ChatGPT (Codex CLI) and Gemini side by side with usage and reset times; agent steps streamed live through hooks, and a Claude permission answered from the notch, lock screen or Telegram.
- A Cloudflare Worker with D1 as the relay between Mac and phone (no direct connection); a bearer token compared in constant time, hooks with a per-install secret, tokens in the Keychain.
- Keeps the Mac awake while agents work, lid closed too (a sudoers rule for sleep only), with battery and CPU temperature safeties; 20 animated characters, editable from the phone too.
- A night shift: a task sent on Telegram is done by Claude while I am away from the Mac, in its own working copy and branch, ending in a draft PR; talking to the notch through Gemini (a question, a reminder, a task for an agent). Plus Wisp Buddy, a desktop character (physics in Rust, windows from CoreGraphics, reminders through Gemini).

JOB TRACKER 2026

job-tracker-10s.pages.dev • More about it: erikkarasek.cz/job-tracker

- A board for tracking applications (wishlist → applied → interview → offer/rejected) with stats built on the history of stage changes: a funnel, a per-day graph and a watch on applications gone quiet.
- Three AI agents on Cloudflare Workers AI (tool calling): a posting link becomes a card with a fit score and a cover letter, a résumé reordered for that role, and a pre-interview brief on the company.
- A scout on a cron trigger: every morning it reads Jobs.cz and the Labour Office's open data, cheap filters drop senior and non-IT postings, and scoring runs in two rounds (a small model ranks, a larger one re-measures the promising ones against missing requirements).
- React 19 + Vite, a Hono REST API as a Cloudflare Pages Function, data in D1, TypeScript with shared types; every push runs API tests (Postman/Newman) and UI tests (Playwright) in CI against a fresh build with its own database.

SUBSCRIPTION TRACKER 2026

github.com/ErikKarasek/subscription-tracker • More about it: erikkarasek.cz/subscriptions

- Subscription overview: spend by category, what was actually paid over time, and a watch on upcoming payments and unused services.
- One Cloudflare Worker serves the site and a Hono API; a daily cron rolls payments forward and sends email through Resend.
- Data in Cloudflare D1; payment screenshots imported through a vision model on Cloudflare Workers AI, currencies converted at ECB rates.

NEXUS GRIND 2026

github.com/ErikKarasek/nexus-grind-releases • More about it: erikkarasek.cz/nexus-grind

- Cross-platform productivity tracker (tasks, habits, projects, sleep/wellness) with a gamified companion tree and an AI Coach.
- Desktop (React + Tauri) and mobile (React Native / Expo) over shared logic with unit tests; local-first with optional Supabase sync, CI/CD builds the Windows installer, macOS app and Android APK.

SKILLS

AI: My own AI agents and assistants on Cloudflare Workers AI (tool calling, prompt engineering); Claude and Gemini CLI while developing.

Programming: TypeScript, Node.js, Python, React; Swift/SwiftUI and Rust in my own apps; web scraping, JSON/REST APIs.

Cloud & web: Cloudflare Workers, REST API integrations, client-side apps.

Software testing: Test cases, test scenarios, DEV environments, Jira.

IT support: L1 helpdesk, ticketing (JIRA), incident escalation.

Systems & hardware: Windows 10/11, Active Directory basics, RDP, TeamViewer, LAN/Wi-Fi troubleshooting; fault diagnosis and component replacement.

3D graphics: Blender: modelling, texturing, basic animation.

EDUCATION

Information Technology and Economics (Maturita), T. G. Masaryk Business Academy, Kostelec nad Orlicí, 2021 – 2025

- Programming and application development, databases and SQL, computer networks and hardware, web development.
- The economics half of the field: accounting, tax, the basics of law and how a company runs, so a brief from the business side is not foreign to me.

LANGUAGES & MORE

English: fluent, used daily at work and in my projects; Cambridge English First (FCE)

Other: driving licence category B; PC hardware and builds, AI and new tech, fitness, fashion and style
